Memory Activity Follow Up Reflection  
Due Wednesday, March 3<sup>rd</sup>, 2010

Choose one of these activities that we did (grid, numbers, word memory).

What do you think was going on in your brain from the beginning (when you were presented with the directions) to the end (when you were synthesizing the results)?

Include potential thematic regions of the brain/processing centers (i.e.: memory, visual perception, auditory, motor skills, short term memory, etc)

Your answer could be a visual diagram with labels.

- Hint: Where is the process starting? Your eyes? Your ears? Your hands?
- Hint: What potential pathways would be used? Spinal cord? Smaller nerves?

Be as technical as you can but don't worry if you're limited to saying, 'the memory area of my brain' or something like that!
